# The customer speaks

"Without data or reliable storage, there is no power."

For Elia, operator of the high-voltage electricity transmission system in Belgium, availability and redundancy are key. That's why they recently awarded a 5-year, 2 million euro contract for **NetApp storage** to Simac ICT Belgium. Simac is responsible for the installation, training and maintenance of hardware and software, and the contract can potentially be prolonged for another 5 years.

Vlaams Brabant province goes hyper-converged

Hyper-converged infrastructure stands for simple management, high density, less cooling and rackspace, reduced energy consumption, less complexity, higher flexibility and easy scalability. Here's why the Flemish province of Vlaams Brabant awarded a 4-year frame agreement for **servers and storage** to Simac ICT. The contract stipulates delivery of SimpliVity (HPE) hyper-converged infrastructure, HPE servers, NetApp storage, VMware licences, Microsoft solutions and licenses, Veeam, plus UPS systems of APC by Schneider Electric.

Market Vision

A smart city is not a siloed city

Smart Cities are a great idea. The best way to encourage their vision is by taking a broad view and not opting for silos, says **Johan Diels** in his blog. The true value of a Smart City project lies in bundling all the vertical solutions and projects into a unified view that offers insight into the interactions of lighting, traffic, parking, waste management, Wifi deployment, etc.

Going end-to-end with HPE

Simac ICT Belgium has extended its relationship with **HPE**. In addition to the server and Simplivity hyper-convergence solutions for which Simac has long been known, the all-around integrator now adds HPE's networking and storage solutions. This turns Simac into a one-stop-shop when it comes to enterprise infrastructure.
