Building a career as a specialist in your domain of interest

You will become a well-trained engineer in systems, networking and security or monitoring solutions

Joining a family-owned business with a unique culture

You will be part of a close team where your input and contributions are highly valued

What other interns say

“

During my studies Applied Information Technology, I was very interested in everything about networking and security. I had the opportunity to do my internship at Simac in the networking team. The engineers are specialised in network and security technologies and they work together with leading vendors such as Cisco and Fortinet. They gave me the opportunity to work on various projects ranging from modifying existing infrastructure to integrating new infrastructure. I enjoyed being part of a close team of experienced engineers who also had fun together off working hours. This motivated me to start my career as a network engineer at Simac after finishing my internship.

Jorne, Network Engineer

”

“

I did my internship at Simac for 13 weeks in the Business Management Solutions department. I was immediately integrated in the team and my colleagues involved me in every part of the job. At Simac everyone knows everyone, and you don't feel like a number. During my internship I developed a troubleshooting tool that was implemented and is still used by the team today. After my studies, I did not doubt for one minute about joining the company. I'm challenged each day to work independently and to develop myself to become an expert in a diverse range of monitoring technologies.

Marwane, Technical Consultant
